

TENNISENTITYSTAT

Scope: These rules shall apply to this contract.

Underlying: The Underlying for this Contract is the official <statistic>s attributed to <entity> for <scope> of <tennis match>. Revisions to the Underlying made after Expiration will not be accounted for in determining the Expiration Value.

Source Agency: The Source Agencies are, in hierarchical order, the governing body sanctioning the competition(s) comprising <scope> (the Association of Tennis Professionals (ATP), the Women's Tennis Association (WTA), or the International Tennis Federation (ITF), as applicable) together with its official statistics or data provider, the official tournament authority hosting the competition(s) comprising <scope> (Tennis Australia, the Fédération Française de Tennis (FFT), the All England Lawn Tennis Club (AELTC), the United States Tennis Association (USTA), or the official sanctioned tour or tournament operator, as applicable), the official broadcaster of <tennis match>.

Type: The type of Contract is an Event Contract.

Issuance: After the initial Contract, Contract iterations will be listed on an as-needed basis at the discretion of the Exchange and corresponding to the risk management needs of Members.

<entity>: <entity> refers to a tennis competitor or competing unit officially entered in, or officially recognized as participating in, the competition(s) comprising <scope> as recognized by the governing body (e.g., ATP, WTA, ITF, or the organizing tournament authority). An <entity> may be (i) an individual player (singles), (ii) a doubles pair entered together as a team, or (iii) a national, regional, or representative team competing in a team competition (e.g., a country competing in the Davis Cup or the Billie Jean King Cup). Identity persists through changes of name, nationality, ranking, seeding, or (for teams) changes of name, membership, or representation, where the Source Agency continues to recognize the competitor or unit as the same participant. Where two competitors share the same surname, the full name as listed in the official entry list governs. <entity> may also take the form "any <entity>" (any single competitor or unit meeting specified criteria) or refer to a specified competitor or unit by name, ranking, seeding, or other distinguishing characteristic. Where <entity> refers to a doubles pair or team, <statistic> is evaluated using the official figure the Source Agency attributes to that pair or team; where the Source Agency records the relevant metric only per individual member, the pair's or team's value is the sum of its members' recorded values for the portion of <scope> in which they competed together as that unit, unless <statistic> expressly specifies an individual member.

<statistic>: <statistic> refers to a single permitted metric, or a specified combination of permitted metrics aggregated by addition (provided the combination and its components are stated), the value of which is attributed to <entity> and evaluated against the condition specified by the Exchange under the Payout Criterion. The permitted metrics are limited to the following objective, officially tabulated counting statistics, each as recorded in the official statistical record: aces; first serves made (first serves in); first-serve percentage; first-serve points won; second-serve points won; total service points won; total return points won; total points won; total match points (the total number of points played in the <tennis match>); match points lost (the total number of points lost by <entity>); break points faced; break points saved; break points converted; break points earned; service games won (held); return games won (breaks of serve); games won; games lost; consecutive games won; consecutive games lost; sets won; sets lost; tiebreaks won; tiebreaks lost; matches won; matches lost; matches won on a specified surface; matches lost on a specified surface; average rally length; longest rally; and titles won. A <statistic> may reference a single permitted metric or a specified combination of permitted metrics aggregated by addition, provided the combination and its components are stated. Consecutive games won and consecutive games lost are each evaluated as the longest unbroken run of consecutive games won, or lost respectively, by <entity>, computed from the official game-by-game record published by the Source Agency, measured within a single <tennis match>; where <scope> spans more than one <tennis match>, the value is the greatest such run achieved by <entity> in any single <tennis match> within <scope>. Longest rally is the greatest rally length recorded in any single point of a <tennis match> within <scope>, and average rally length is the total rally length across all recorded points divided by the number of such points across all tennis matches within <scope>, in each case as recorded by the Source Agency, where rally length means the number of shots in a point as recorded by the Source Agency. Matches won on a specified surface and matches lost on a specified surface are counted only for tennis matches the Source Agency officially designates as played on the specified surface (grass, hardcourt, or clay).

Consecutive games won, consecutive games lost, longest rally, and average rally length are not aggregated by addition across tennis matches; each is instead computed as described above solely from the games or points officially recorded by the Source Agency, including those recorded in any <tennis match> shortened by retirement, default, or abandonment. Metrics whose determination depends on the subjective judgment of a scorer or statistician—including, without limitation, winners, unforced errors, and forced errors—are not permitted metrics and will not be listed as <statistic>. All permitted metrics are counting statistics expressed as whole numbers, except (i) first-serve percentage, which is expressed as a percentage equal to the number of first serves made divided by the number of first-serve attempts, rounded to the nearest tenth of one percent as recorded by the Source Agency, and (ii) average rally length, which is expressed as a number of shots rounded to the nearest tenth as recorded by the Source Agency.

<above/below/between/exactly/at least>: <above/below/between/exactly/at least> refers to the comparison operator specified by the Exchange that relates the value of the permitted metric (or specified combination of permitted metrics) attributed to <entity> to <count>. "More than <count>" (equivalently "above <count>") means strictly greater than <count>; "at least <count>" means greater than or equal to <count>; "exactly <count>" means equal to <count> at the precision at which the Source Agency records the metric; "at most <count>" means less than or equal to <count>; "fewer than <count>" (equivalently "below <count>") means strictly less than <count>; and "between <count> and <count>" means greater than or equal to the lower <count> and less than or equal to the higher <count>, inclusive of both endpoints unless the Exchange specifies otherwise.

<scope>: <scope> refers to the competitive span over which <statistic> is measured, as specified by the Exchange. <scope> may be (i) a single <tennis match>; (ii) a specified set, or specified sets, within a single <tennis match>; (iii) a specified grouping of tennis matches (e.g., a specified round, a specified tournament, a specified series or stage of a competition, or any tennis match within such a grouping); (iv) a <time period> (e.g., a specified season, calendar year, calendar month, or tournament occurring within a <time period>); or (v) the entirety of <entity>'s competitive career as recorded by the Source Agency.

<tennis match>: <tennis match> refers to the officially scheduled contest between two players (singles) or two teams (doubles) as recognized by the governing body of the tournament. <tennis match> may be defined by the names of the players involved, by the stage of the tournament, as any tennis match within a set of tennis matches (including within or representative of the whole or multiple tournament(s)), or by distinguishing characteristics. <tennis match> may also take the forms "Any" or "None."

<time period>: <time period> refers to a specific duration or range of time as specified by the Exchange. May be expressed as a calendar year (e.g., "2025"), a calendar month and year (e.g., "January 2025"), a calendar quarter (e.g., "Q1 2025"), a specific week, a season (e.g., "2024-25 ATP Season"), or other bounded time periods as appropriate to the contract subject matter. All time periods are interpreted in Eastern Time (ET) unless otherwise specified. The end of <time period> is defined as 11:59:59 PM ET on the final day of the specified period unless otherwise specified. The Exchange may list iterations of the Contract corresponding to variations of <time period>.

<count>: <count> refers to a numerical value specified by the Exchange. May refer to exact counts, minimum thresholds, maximum limits, or ranges, and may be expressed as "at least X," "no more than Y," "between X and Y," or "X or more." For all permitted metrics other than first-serve percentage and average rally length, <count> is a non-negative whole number; for first-serve percentage, <count> is a percentage expressed to the nearest tenth of one percent; for average rally length, <count> is a number of shots expressed to the nearest tenth.

Payout Criterion: The Payout Criterion for the Contract encompasses the Expiration Values in which <entity> recorded <above/below/between/exactly/at least> <count> <statistic> in <scope>.

- <entity> is considered to have recorded a value of <statistic> that is <above/below/between/exactly/at least> <count> in <scope> if, and only if, the official statistical record published by the highest-priority available Source Agency attributes to <entity>, for the portion of <scope> that has been officially recorded, a value of the permitted metric (or specified combination of permitted metrics) comprising <statistic> that is <above/below/between/exactly/at least> <count>. The determination is made solely from the value attributed to <entity> by the highest-priority available Source Agency; where the official statistical record of a higher-priority Source Agency conflicts with that of a lower-

priority Source Agency, the higher-priority Source Agency's record governs.

- Where <scope> spans more than one <tennis match>, the value of the permitted metric (other than consecutive games won, consecutive games lost, longest rally, and average rally length, which are evaluated as provided in the <statistic> definition) is the cumulative total attributed by the Source Agency to <entity> across all tennis matches within <scope> in which at least one point is played, including any such <tennis match> that ended by retirement, default, or abandonment. First-serve percentage over a multi-match <scope> is computed as total first serves made divided by total first-serve attempts across those tennis matches in which at least one point is played. Tennis matches within <scope> that are not played (including those decided by walkover, i.e., where no point is played) contribute no value.
- Where a <tennis match> within <scope> begins (at least one point is played) but ends by retirement, default, or abandonment, the statistics officially recorded for that <tennis match> as of its conclusion are final and count toward <statistic>. However, where <scope> is that single <tennis match> (or a set within it) and the Payout Criterion cannot be unconditionally determined from the statistics officially recorded as of that conclusion (for example, an "at least <count>" threshold that has not yet been met), the Contract resolves to the last fair price as determined in the sole discretion of the Exchange.
- Where the Exchange specifies a relative condition (e.g., "the most," "the fewest," "leads," or "more than any other entity") in lieu of an absolute threshold, <entity> is considered to have recorded that relative condition, and the Contract resolves Yes, only if the value of <statistic> attributed to <entity> is strictly more extreme—strictly the greatest, for "the most," "leads," or "more than any other entity," or strictly the least, for "the fewest"—than the value attributed to every other entity within the comparison set defined by <scope>. Where <entity> ties for the most extreme value with one or more other entities, such that N entities (including <entity>) are attributed that same most extreme value, the Contract resolves at a value equal to the Settlement Value divided by N (for example, where <entity> and one other entity both record the highest total, the Contract resolves at \$0.50 per contract).

Additional clarification(s):

- Where <scope> is a single tennis match (or a set within a single <tennis match>) and that <tennis match> is cancelled prior to the first point being played, or <entity> withdraws prior to the first point of that <tennis match> (a walkover), the Contract resolves to the last fair price as determined in the sole discretion of the Exchange.
- Where <scope> is a single <tennis match> and that <tennis match> is cancelled or discontinued after the first point is played, the Contract resolves on the basis of the statistics officially completed and recorded prior to the cancellation or discontinuation if the Payout Criterion can be unconditionally determined therefrom (for example, an "at least <count>" or "more than <count>" threshold that the recorded statistics have already met resolves Yes, and an "at most <count>" or "fewer than <count>" threshold that the recorded statistics have already exceeded resolves No); otherwise the Contract resolves to the last fair price as determined in the sole discretion of the Exchange.
- Where <scope> is a grouping of tennis matches or a <time period> and <entity> competes in no <tennis match> within <scope> in which at least one point is played, no value is attributed to <entity> and the Contract resolves No.
- Where a <tennis match> relevant to <statistic> is delayed but is scheduled to occur within the same containing competition or <time period> comprising <scope>, the market will remain open. A change of venue, playing surface, or court conditions that does not change the containing competition or <time period> comprising <scope> does not affect the market. Where a <tennis match> relevant to <statistic> is delayed beyond the end of the <time period> comprising <scope>, statistics from that delayed <tennis match> are not counted toward <statistic>.
- If a Source Agency publishes a statistical record that it subsequently retracts, corrects, or confirms was the result of a compromised, hacked, or erroneous source, the Exchange will rely on the final corrected record published by the Source Agency prior to the Expiration time. Revisions or corrections recorded after Expiration will not be accounted for in determining the Expiration Value, and the disqualification of any participant after the conclusion of a relevant <tennis match> will not adjust the statistics officially recorded for that <tennis match>.

Examples that would resolve the market to Yes:

- "Will <entity = Player A> record <statistic = at least 15 aces> in <scope = the 2026 Wimbledon men's singles final>?" — Player A is officially credited with 18 aces in that completed match ($18 \geq 15$).
- "Will <entity = Player B> record <statistic = the most aces> in <scope = the 2026 US Open women's singles

tournament>?” — Player B is officially credited with 52 aces across the tennis matches she played, strictly more than any other entrant records.

- “Will <entity = Player D> record <statistic = at least 30 matches won> in <scope = the 2026 ATP Season>?” — Player D’s officially recorded season win total reaches 31; the Contract resolves Yes upon reaching 30 and expiration is moved earlier in accordance with Rule 7.2.
- “Will <entity = Player E> record <statistic = at least 10 break points saved> in <scope = a specified match>?” — Player E faces 14 break points and saves 11 before retiring after the second set; the official record of 11 break points saved is final ($11 \geq 10$).
- “Will <entity = Player I> record <statistic = at least 2 aces> in <scope = a specified match>?” — the match is discontinued after the first set with Player I officially credited with 3 aces; the threshold is already met and further play could not unmeet it, so the Contract resolves Yes ($3 \geq 2$).

Examples that would NOT resolve the market to Yes:

- “Will <entity = Player A> record <statistic = at least 15 aces> in <scope = the 2026 Wimbledon men’s singles final>?” — Player A is officially credited with 12 aces ($12 < 15$).
- “Will <entity = Player B> record <statistic = the most aces> in <scope = the 2026 US Open women’s singles tournament>?” — Player B records 40 aces while another entrant records 55; Player B’s total is not the greatest.
- “Will <entity = Player F> record <statistic = at least 1 tiebreak won> in <scope = a specified match>?” — the match is played to completion under a format that employs no tiebreaks, so no tiebreak is recorded; the threshold cannot be met and the Contract resolves No.
- “Will <entity = Player G> record <statistic = at least 20 aces> in <scope = the 2026 Australian Open men’s singles tournament>?” — Player G loses in the first round with 8 aces and plays no further matches in that tournament ($8 < 20$).
- “Will <entity = Player J> record <statistic = at most 3 break points faced> in <scope = a specified match>?” — the match is discontinued after Player J has already faced 6 break points; the recorded count has already exceeded the threshold and further play could only add to it, so the Contract resolves No ($6 > 3$).

If a natural person who is the primary subject of a Contract’s Underlying or Payout Criterion dies prior to Expiration, Kalshi may, in its sole discretion, settle the Contract at the last traded price prior to the death. If Kalshi determines that trading activity was materially affected by the circumstances giving rise to the death, Kalshi may instead use the last traded price prior to such circumstances becoming known or reasonably anticipated by market participants. For purposes of this Rule, Kalshi may rely on an approximate time where the precise time is unknown or cannot be reasonably determined. If Kalshi determines that no last traded price represents a fair settlement, the Outcome Review Committee shall determine the fair settlement price. Kalshi may halt or pause trading in any such Contract (with public notice on Kalshi’s website or the Platform) if it reasonably believes that the death of such person has occurred, is imminent, or that circumstances giving rise to the death may be occurring. Determinations of Kalshi and the Outcome Review Committee under this Rule are final and not subject to review.

Minimum Tick: The Minimum Tick size for the Contract shall be \$0.01.

Position Accountability Level: The Position Accountability Level for the Contract shall be \$25,000 per strike, per Member.

Last Trading Date: The Last Trading Date of the Contract will be the same as the Expiration Date. The Last Trading Time will be the same as the Expiration time.

Settlement Date: The Settlement Date of the Contract shall be no later than the day after the Expiration Date, unless the Market Outcome is under review pursuant to Rule 7.1.

Expiration Date: The latest Expiration Date of the Contract shall be one week after the latest scheduled conclusion of <scope> (for example, one week after the latest scheduled date of the final <tennis match> comprising <scope>, or one week after the end of <time period> where <scope> is a <time period>). If an event described in the Payout Criterion occurs, expiration will be moved to an earlier date and time in accordance with Rule 7.2.

Expiration time: The Expiration time of the Contract shall be 10:00 AM ET.

Settlement Value: The Settlement Value for this Contract is \$1.00.

Expiration Value: The Expiration Value is the value of the Underlying as documented by the Source Agency on the Expiration Date at the Expiration time.

Contingencies: Before Settlement, Kalshi may, at its sole discretion, initiate the Market Outcome Review Process pursuant to Rule 7.1 of the Rulebook. If an Expiration Value cannot be determined on the Expiration Date, Kalshi has the right to determine payouts pursuant to Rule 7.1 in the Rulebook.

APPENDIX B – TRADING PROHIBITIONS

In addition to the general prohibition against trading on material nonpublic information, the Exchange will institute additional prohibitions for trading the contract. Persons under 18 years of age are not permitted to create Kalshi accounts. The following individuals will be prohibited from trading:

- Current and former players, and the coaches, trainers, physiotherapists, medical staff, hitting partners, agents, managers, and other support-team members of any <entity> referenced in the Contract; where <entity> is “any <entity>,” this applies to all such persons for every competitor or unit eligible to satisfy the Payout Criterion within the competition(s) comprising <scope>.
- Chair umpires, line umpires, review officials, referees, supervisors, and other on-court or tournament officials of the competition(s) comprising <scope>.
- Employees, officers, contractors, and statisticians of the governing body sanctioning the competition(s) comprising <scope> (ATP, WTA, or ITF), of the official tournament authority, and of the official statistics or data provider responsible for compiling, scoring, or first publishing the Underlying.
- Employees and contractors of any broadcaster, data vendor, or other party with access to the official statistical feed or scoring data prior to its public release, and any person with access to material nonpublic information regarding the fitness, injury, withdrawal, or scheduling of a competitor relevant to the Contract.
- Ultimate beneficial owners and operators of the tournament(s) or event(s) comprising <scope>; and
- Household members and immediate family of all of the above.
